Homework exercises adapted from a wide range of arguments in a wide variety of sources. Practical advice to help students succeed. Model answers to odd-numbered problems, including commentaries on the strengths and weaknesses of selected sample answers and further discussion of some of the substantive intellectual, philosophical, or ethical issues they raise. Comments on the first edition: "Quite simply, one of the best critical-thinking texts I have read. Unlike many critical-thinking books, there is a particular and efficacious focus on helping the reader write an argumentative essay. . . . There are over sixty exercise sets, not one of which is frivolous. The model responses are typically excellent, some providing both weak and strong examples for

answers, and the answers are often followed by commentary. . . . The expository clarity is as good as it gets." —Chris Jackson, Teaching Philosophy

David R. Morrow is Visiting Fellow at the Institute for Philosophy and Public Policy at George Mason University. Anthony Weston is Professor of Philosophy and Environmental Studies at Elon University.

excellent coursebook for highschool or college level critical thinking. Very well and clearly organized, good examples and exercises. Very concrete and relevant -- introduces and explains concepts of formal logic and rhetoric but gets right down to using them in real life discourse and writing. Even includes references to videos.

Very effective and relatively brief explanation on the beauty of argument and its many forms and not so effective forms, relaying the steps and requirements of effective arguments in the form of Rules as you read through the chapters.
